# 1. VT-x/AMD-V is not enabled

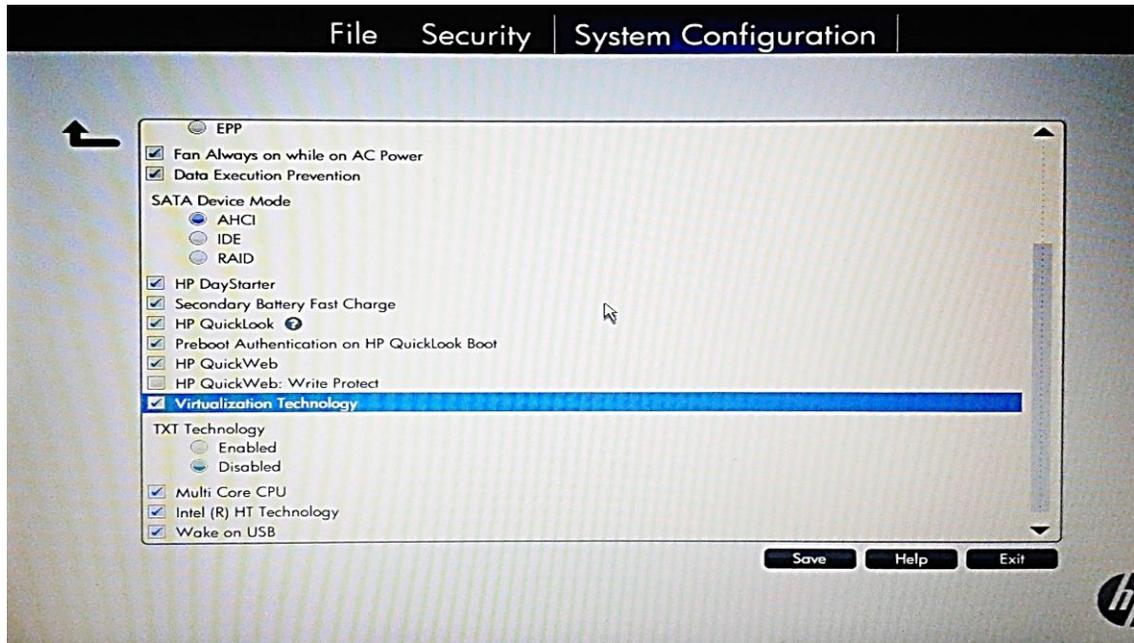

VT-x is disabled in the BIOS for both all CPU modes (VERR\_VMX\_MSR\_ALL\_VMX\_DISABLED)

VT-x/AMD-V hardware acceleration is not available on your system. Your 64-bit guest will fail to detect a 64-bit CPU and will not be able to boot.

# 1. VT-x/AMD-V is not enabled

Visit the page to find a way on how to enable a Virtualization in your hardware:  
<https://2nwiki.2n.cz/pages/viewpage.action?pageId=75202968>

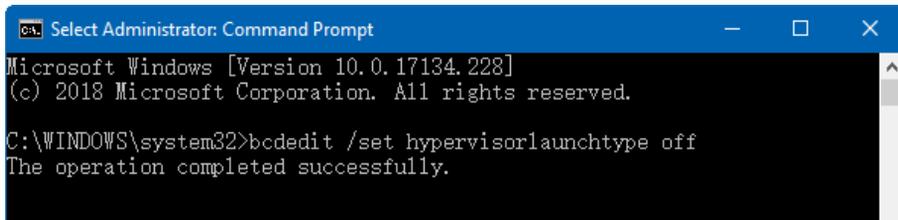

## 2. VirtualBox and Hyper-V conflict

In some cases Oracle VM VirtualBox cannot be used on a Windows host where Hyper-V is running. When using this feature, some host systems might experience significant Oracle VM VirtualBox performance degradation or fail to run with the error message.

The solution might be Disabling Hyper-V.

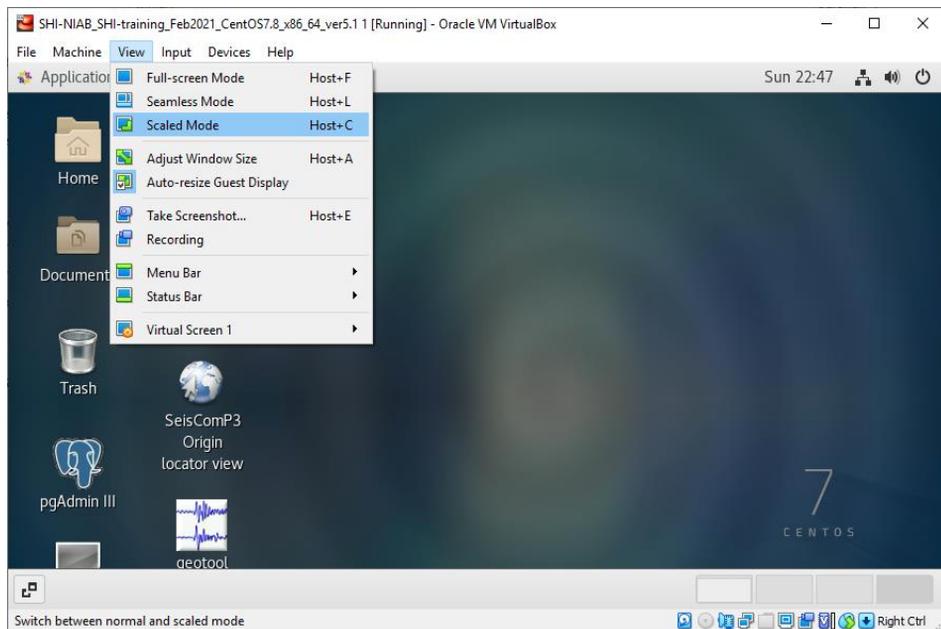

- Press Windows logo key + X, then press A key to run Command Prompt as administrator.
- In Command Prompt window, type **bcdedit /set hypervisorlaunchtype off** and press Enter key to execute this command.

# 3. Small size of the VM Desktop

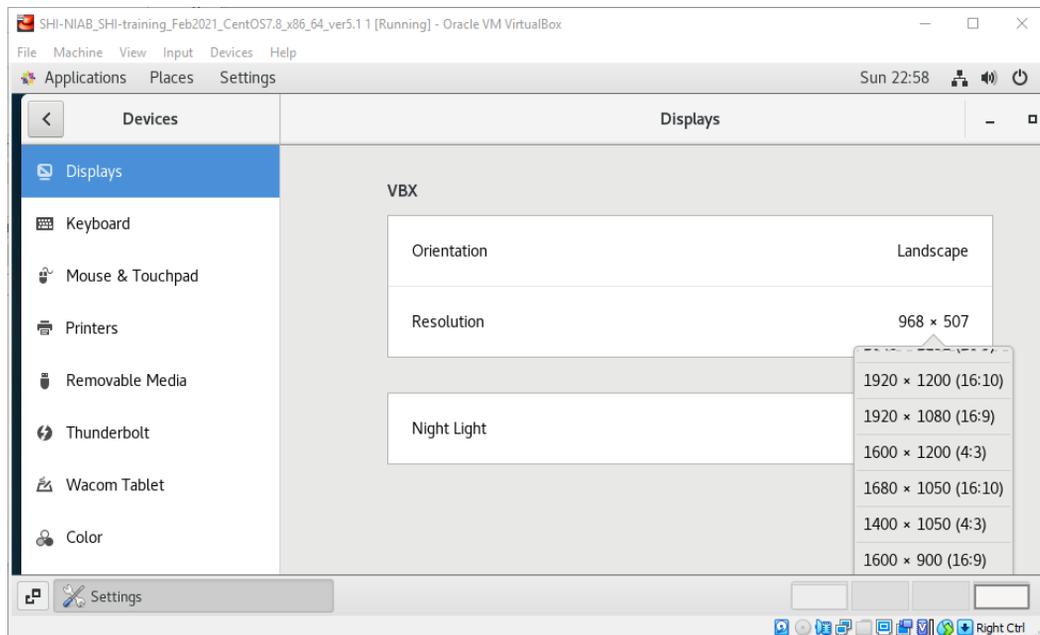

Some NDC-in-a-Box applications require a screen with HD resolution to accommodate the entire GUI: panels, buttons, maps, etc. In case the native resolution of your monitor lower than HD, it still can be used in Scaled Mode:

- Select from the main menu of VirtualBox: View->Scaled Mode
- From the main menu of the Virtual Machine select: Applications->System Tools->Settings

# 3. Small size of the VM Desktop

- From the left panel of Settings window choose Devices, then Displays.
- Click on the Resolution parameters and select a better resolution which fits your screen ratio. Click Apply changes.

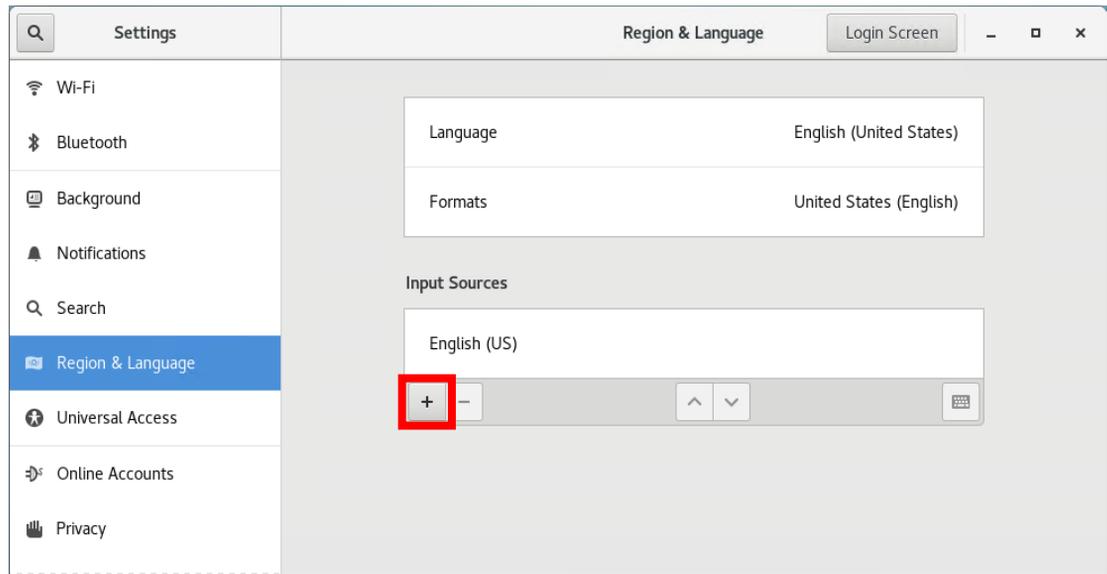

# 4. Setting your keyboard layout

If your keyboard layout is different from the English QWERTY as preconfigured in the provided VM, you can easily change it by following the steps:

- From the left panel of the Settings window choose “Region & Language” item and click “+” button under the Input Sources panel.

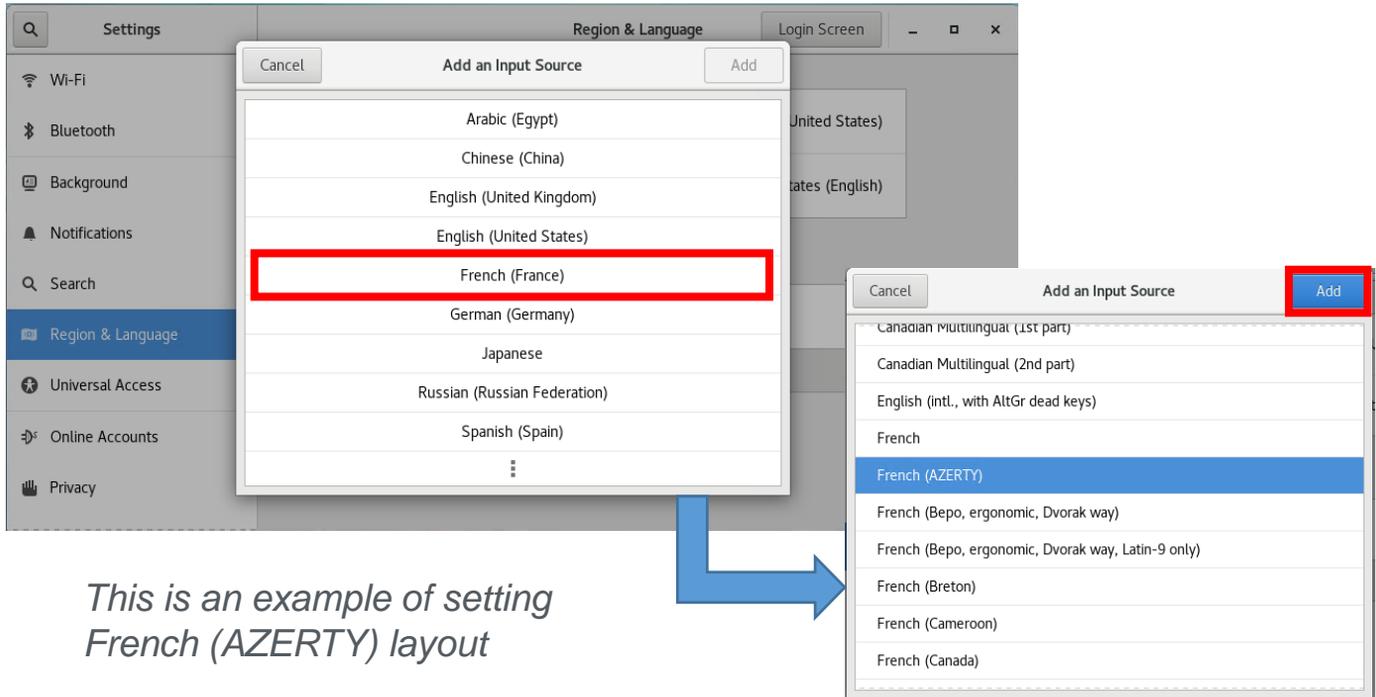

Double-click  
this icon on  
the desktop

# 4. Setting your keyboard layout

- Select first your language and then a keyboard layout. Click Add button.

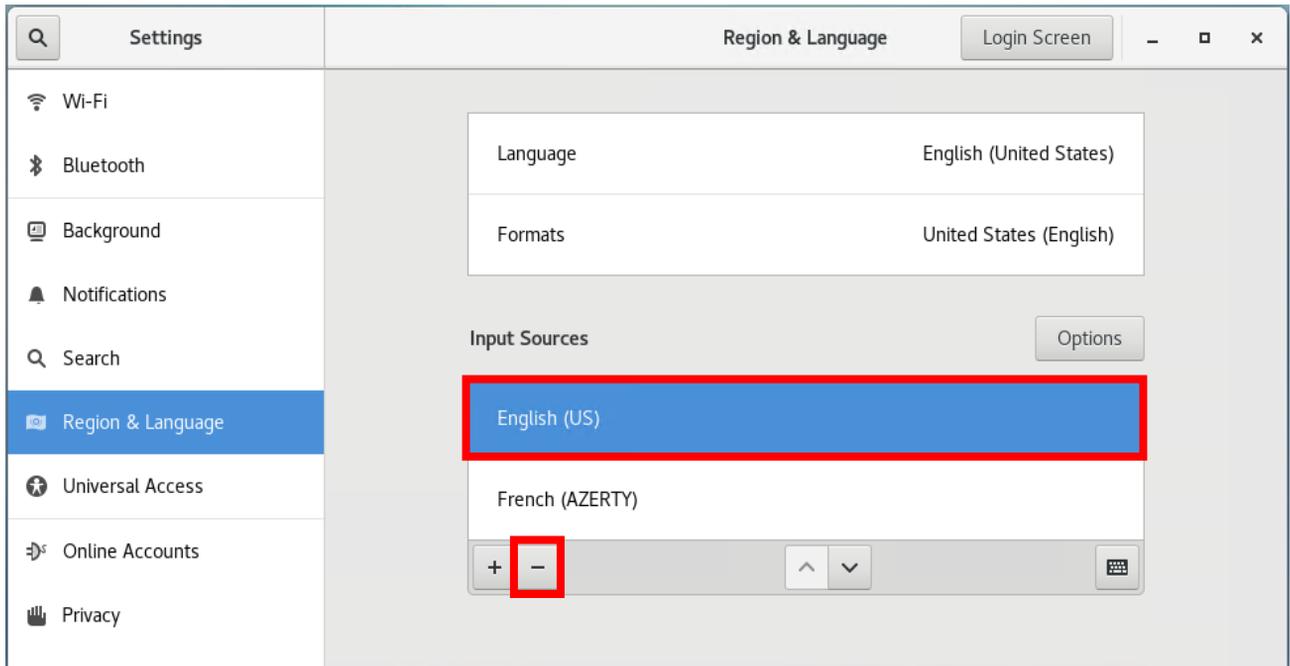

The image shows a sequence of two screenshots from a macOS System Settings window. The first screenshot shows the 'Region & Language' settings page with the 'Add an Input Source' dialog open. The dialog lists various languages, and 'French (France)' is highlighted with a red rectangular box. The second screenshot shows the same dialog after clicking 'Add', displaying a list of French keyboard layouts. 'French (AZERTY)' is selected and highlighted in blue, and the 'Add' button in the top right corner of the dialog is highlighted with a red rectangular box. A large blue arrow points from the first dialog to the second.

*This is an example of setting French (AZERTY) layout*

# 4. Setting your keyboard layout

- You can further remove the English (US) layout by selecting it in the Input Sources panel and clicking “-” button below.

**Thank you!**
